Traditional development VS low code

Aim :-

To study and compare Traditional and low code

Traditional development

* Requires manual coding
* use programing Language such as Java
* Highly customizable
* Requires software developer

Advantages :-

* FULL Control over Application design
* High flexibity and customization
* Better performance for complex problems

disadvantage

* Higher cost
* Requires experiance
* takes over time

low code development

* use drag and drop visuals
* Requires no coding
* Faster application development

adv

* Faster development
* lower development cost
* easy to learn and use
* enable non programmers

disadv

* limited customization
* Depends on the low code platform
* performance may be issue for complex application

Result

Thus, the traditional development and low code studied successfully
